I sometimes need to search an array of strings for a specific value, so I came up with this function.

```
<cffunction name="ArrayFind" access="public" output="false" returntype="numeric">
    <cfargument name="array" type="array" required="true" />
    <cfargument name="find" type="any" required="true" />

    <cfset var position = 0 />
    <cfset var x = 0 />

    <cfloop from="1" to="#ArrayLen(arguments.array) #" index="x">
        <cfif arguments.array[x] eq arguments.find>
            <cfset position = x />
            <cfbreak />
        </cfif>
    </cfloop>

    <cfreturn position />
</cffunction>
```
