I ran across this bit of CF code in a project that I'm working on upgrading, and I was so completely confused by the it that I thought I might throw it up here to see what people think of it.

```
...

<cfloop query="GetTimesheetData">
    <cfset additionalNumber = additionalNumber />

    <cfloop from="#startDate#" to="#endDate#" index="i">
        <cfset temp_list="hours_#projectCode#_#taskCode#_#positionCode#_#i#" />
        <cfset temp_projectCode = ListGetAt(temp_list,2,"_") />
        <cfset temp_taskCode = ListGetAt(temp_list,3,"_") />
        <cfset temp_positionCode = ListGetAt(temp_list,4,"_") />
        <cfset temp_WorkDate = ListGetAt(temp_list,5,"_") />

        <cfif temp_WorkDate eq i>
            <cfif temp_projectCode eq projectCode>
                <cfif temp_taskCode eq taskCode>
                    <cfif temp_positionCode eq positionCode>
                        <!-- Do stuff with the data -->
                        ...

                    </cfif>
                </cfif>
            </cfif>
        </cfif>
    </cfloop>
</cfloop>

...
```

I personally cannot think of anything that the code inside the <cfloop> actually accomplishes. Am I missing something?
