More in my series showing how to do small things with AngularJS. This time its controlling masking layers "the Angular way" but using `ng-class` to apply the masking layer. The CSS code is largely just your bog standard masking layer code with a centered alert box, but I've added a CSS3 animation for the opacity to make it fade in and out.

Start with a boilerplate:

Close

- jQuery
- Vue
- React
- React + JSX
- Preact
- TypeScript
