

Looping over Date Ranges

Learned something new today: `<cfloop>` can be used to loop over date ranges. This is because dates are represented as integer values in ColdFusion, so incrementing a date by 1 day is really incrementing the underlying value by 1. This means that you can do this:

```
<cfset startDate = Now() />
<cfset endDate = DateAdd("ww", 1, startDate) />

<cfloop from="#startDate#" to="#endDate#" index="date">
    <cfoutput>#DateFormat(date, "mm-dd-yyyy")#</cfoutput><br />
</cfloop>
```

And get this:

```
04-16-2009<br />

04-17-2009<br />

04-18-2009<br />

04-19-2009<br />

04-20-2009<br />

04-21-2009<br />

04-22-2009<br />

04-23-2009<br />
```

Everyone else probably knew this, but I thought it was really nifty :)
